

## **Biologically degradable**

The 'Oil of Rohloff' is certified as a quickly bio-degradable lubricant under test protocol CEC-L-33-T-82. A special test procedure stands behind this certification whereby the lubricant is mixed with special bacteria in a controlBiologically degradable:

The 'Oil of Rohloff' is certified as a quickly bio-degradable lubricant under test protocol CEC-L-33-T-82. A special test procedure stands behind this certification whereby the lubricant is mixed with special bacteria in a controlled experiment. The volume of bacteria which has biodegraded after 21 days is then assessed carefully.

We are extremely proud of the status our "Oil of Rohloff" achieved, showing that approximately 90% of bacteria found, had disappeared following the 21-day test period.

## **Re-usable bottles**

The Oil of Rohloff is supplied in reusable plastic bottles and as such, can easily avoid the recycling bin. Customers can simply take their empty bottle to their local dealer/refill station and purchase a refill. The Rohloff AG offer 5l Oil of Rohloff canisters equipped with a handy filling pump, to quickly and cleanly refill customer bottles.

We are convinced that the reusable bottle system, thanks to its reduced environmental impact and the considerably reduced cost for the customer (approximately half that of a new bottle), will establish itself as the way forward. Currently only available to German based customers
